SACHIN MUDGAL

DevOps Engineer

New Delhi, India | +91 9968925142 | sachin1420sm@gmail.com | Linkedin

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on, project-based training in CI/CD pipeline development, Infrastructure as Code, containerization, and cloud infrastructure on AWS. Experienced building Jenkins pipelines with integrated quality and security scanning, provisioning AWS infrastructure through modular Terraform, automating configuration with Ansible, and containerizing applications with Docker. Comfortable with Linux system administration, Git-based version control, Kubernetes fundamentals, and scripting in Python and Bash to streamline operational workflows. A recent Computer Science graduate seeking an entry-level DevOps Engineer role to apply and grow these skills in a production environment.

TECHNICAL SKILLS

CI/CD: Jenkins (declarative pipelines, parallel stages, approval gates, shared libraries); Git-based workflows

Containerization: Docker, Docker Compose (custom networks, named volumes, multi-container apps); Kubernetes fundamentals (Minikube)

Cloud Platforms: AWS (EC2, VPC, S3, IAM, ALB, ASG, NAT Gateway, Bastion Host, DynamoDB, RDS, CloudFront)

System Administration: Linux (Ubuntu, CentOS, RHEL), WSL2

Scripting & Automation: Python, Bash — task automation, deployment scripting

Infrastructure as Code: Terraform (modules, remote state with S3 + DynamoDB locking)

Configuration Management: Ansible (roles, playbooks, inventory management)

Networking Fundamentals: SSH, DNS, HTTP — used throughout AWS VPC/ALB and Linux server projects

Security & Quality: SonarQube, OWASP Dependency Check, JaCoCo — vulnerability scanning integrated into CI pipelines

Version Control: Git, GitHub

PROJECTS

AWS Highly Available Infrastructure with Terraform Modules

Provisioned highly available AWS infrastructure using modular Terraform — VPC, subnets, security groups, Application Load Balancer, Auto Scaling Group, and EC2 — with remote state managed via S3 and DynamoDB locking to support scalable, version-controlled Infrastructure as Code.

Automated Compliance and Quality Checks Pipeline

Designed a CI pipeline using Jenkins, SonarQube, JaCoCo, and OWASP Dependency Check to enforce code quality, test coverage, and security standards, generating reports and blocking deployment until quality gates were met.

Container Orchestration Exploration — Docker & Kubernetes

Containerized multi-service applications with Docker and Docker Compose, and deployed workloads on Minikube to learn Kubernetes fundamentals (pods, deployments, services).

Ansible Automation Framework for PostgreSQL Management

Created reusable Ansible roles and playbooks to automate PostgreSQL installation, configuration, and management on Linux servers, integrating automation workflows with Jenkins for streamlined provisioning.

CERTIFICATIONS

DevOps Training Certificate — MyGurukulam (Opstree Global)

Japanese Language N4 Certified

EXPERIENCE

Operations & Program Support Intern — Shin Edupower Pvt. Ltd.

Dec 2025 – Apr 2026

Coordinated logistics for an India–Japan collaborative learning program and supported a teacher-training program, recognized for attention to detail and reliability while collaborating with a fast-paced, cross-cultural team.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering

Galgotias University, Greater Noida, Uttar Pradesh — 2021 – 2025

12th Class, CBSE — Navyug School, Laxmi Bai Nagar, New Delhi — 2020 – 2021
